

FINAL PROJECT REPORT

Project: Console-Based Expense Tracker Application

Name: Kavya Lakshmi Potti

Domain: Python

Submission Date: 10-07-2026

CERTIFICATE

This report documents the completion of the Console-Based Expense Tracker Application during the Python Internship.

ACKNOWLEDGEMENT

I thank UpskillCampus, my mentors, faculty members, friends, and family for their guidance and support.

DECLARATION

I declare that this report is my original work completed as part of my internship project.

ABSTRACT

This Python project helps users record, view, search, and calculate expenses using file handling and core Python concepts.

INTRODUCTION

The application provides a simple console interface for daily expense management while demonstrating practical Python programming skills.

OBJECTIVES

Develop an expense tracker, apply Python concepts, improve debugging, file handling, and problem-solving.

SCOPE

Add, view, search, and calculate expenses with persistent text-file storage.

SYSTEM REQUIREMENTS

Hardware: PC/Laptop, 4GB RAM.

Software: Python 3.x, VS Code/IDLE.

TECHNOLOGIES USED

Python, Functions, File Handling, Exception Handling, OOP Concepts.

PROJECT DESCRIPTION & MODULES

Modules include Add Expense, View Expense, Search Expense, and Total Expense Calculation.

IMPLEMENTATION

Implemented using menu-driven programming, functions, loops, conditional statements, string operations, and file handling.

TESTING

Verified add, search, display, and total calculation functionalities using sample records.

CHALLENGES

Resolved logical errors, improved input validation, and organized project modules.

FUTURE ENHANCEMENTS

GUI with Tkinter, SQLite database, charts, authentication, and export features.

CONCLUSION

The project enhanced Python programming, debugging, and software development skills through practical implementation.
